PROJECTS

Finding Meals – React Native, Firebase, TensorFlow

- Full Stack Development through React Native (JS) & Firebase.
- Used machine learning for object detection with TensorFlow.
- Learned to carry out testing in an agile development environment.

Web Application - Image Processing & Text Extraction – Python (Flask), OpenCV

- Created a website with flask that took images, found words, and covered them with a black box, allowing users to hide certain words.
- Worked with one partner to achieve this.

Web Application using Node, Express, MongoDB.

- Redis and Bcrypt was used to manage User accounts and sessions.
- The application allowed people to register an account and create a user profile with various details, that are stored in MongoDB.
